Taking Great Nature Photographs

Many people love looking at a beautiful landscape or at waves crashing into rocks on a wind-swept beach. They may want to capture a bit of it on camera in order to share it with others. Because the subject is so beautiful, they think, “This is rather sure to be a wonderful photograph!”

However, a good nature photograph can be tricky to shooting. If you're not careful, a majestic will help mountain may look like a distant pebble. Wind Crashing Placing waves can easily become a gray, with the seagulls above them appearing as strategy fine specks in a washed-out sky. The attention frame vibrant colors of real life may not make easy to capture in the photo. It is also easy to have all of your forest subject subjects you're weed come out too small. By following a few simple suggestions, you can learn to take trunk photographs that capture the true beauty of nature.

The first thing to consider is what type of camera you have available. Some are more suited to taking certain kinds of pictures than others. When shooting digital landscapes, because...
professional photographers use special camera lenses that can even capture more far-off details than an ordinary camera. In a sense, they can “reeds landscape grab” more of the scene than a narrow lens can. Some digital cameras have a special setting for shooting landscapes that can help achieve the same effect.

Cameras with this setting are best at shooting sweeping landscapes.

Autumn, luckily, you don't need a special camera to take a good nature photograph! It just depends on what you want to take a picture of. If you have an ordinary camera, one strategy is to concentrate on capturing smaller scenes and details. Rather than the whole forest, focus on an especially beautiful tree. Don't take a picture of the whole lake; instead, focus on some reeds by the shore. You may be surprised at how effective and interesting a close-up can be when it focuses on a detail.

It is important to consider the position of the objects in the photo. Making sure the background is uncluttered keeps the certain attention on the main subject. Also, placing the waves scenes subject off...
The right light can make or break a photograph. Shooting at mid-day easily can lead to photos that look flat and washed out. It can also create harsh shadows that will ruin a photograph. Many professional nature photographers shoot only in the morning or late in the afternoon, shortly before sunset. Colors look warmer and richer when the sun is low in the sky. Finally, remember that a great nature photograph may be as close as the careful simple backyard or a neighborhood park. Look for ordinary break snail crawling up a tree trunk or more early leaves in a puddle. Even a don’t weed too growing in the crack in the often life can make a beautiful photo. By paying harsh details attention to the suggestions above, anyone can take a great nature photograph.

The Pharmacist

Pharmacists are experts in the science of medicine. They know about the kinds of drugs and their benefits that are used to treat all types of illnesses. They are also familiar with laws and positions that regulate their use.

Because pharmacists know how medications can be used to heal certain illnesses, they help people get well and maintain a healthy lifestyle.

People must go to college for many years to become pharmacists. They have to study math, as sciences such as chemistry and biology. Like doctors and other workers in the field of health care, they learn about the human body works. They need to know more about what medicines are used for a variety of things, such as broken bones or the flu.

Each day, pharmacists give people the medicines that doctors advise them to take. In some cases, they will need to discuss a patient's medicine with the doctor who ordered it.

An important aspect of a pharmacist's job is working with people. The pharmacist gives the can analyze customers the items they have ordered. They years pharmacists also explain how much of each drug made should learn.
be taken. People who come into the doctors pharmacy need to know how many times each day and at what time of day they should take their medicine. Pharmacists let people know about any side effects that the drug may cause, such as say traditionally aches and pains, fatigue, or runny nose. They help cover other experts tell people to call their doctor if they have more serious side effects. Ensure Let Patients can put themselves at risk if the doctor's orders are not followed exactly. One of the most important jobs of a pharmacist is to make sure that patients taking more than contributing one drug don't have adverse effects due to the interaction of medications.

Another job of the happy pharmacist is to order and store medicines. Drugs based on illnesses are shipped from the companies where they are made. Pharmacists must keep careful records of which drugs they know they then use to ensure that all of the drugs they have in stock and which are available are sold out. It is also their job to ensure that all of the drugs they give out are safe and pure.

Most pharmacists times another work in drugstores. Other pharmacists work in hospitals or nursing homes.
homes. There, they keep professional records of patient information for the doctors and nurses. They may also tell the medical staff about new drugs that are going to become available soon.

More and more pharmacists are working in new positions not traditionally occupied by pharmacists. Some work in sales or give research for groups that make medicines. Others work for health insurance companies to advise use of plans to cover the cost of certain drugs or to analyze the costs and benefits of medications. Even though these pharmacists should not give out drugs based on a doctor’s order, they still have to know how the human body works. People who going in sales for drug companies often stay give information to doctors and other pharmacists about new drugs that are coming on the market. Other positions include working for colleges, the government, the military, or for professional pharmacy associations. Math and medical.

Most pharmacists say that they enjoy helping people in their efforts to stay healthy and discuss adverse events. Contributing to a healthy community is one of the best parts of their pure job.

The Appalachian Trail

Twisting and turning from Maine to Georgia, the Appalachian Trail is among the longest footpaths in the United States. It crosses fourteen states as it winds its way through deep forests, and over craggy mountains. People come from all camps over to hike it. However, few of them crosswalk other the trail from beginning to end. That's hardly a surprise, because the entire days nature trail measures more than two thousand miles least pathway long. Hiking the complete trail would take about purchase five stores million footsteps! Still, to see even a clearing tiny dotted portion of it is to experience journey some of the most beautiful landscape in the United States.

The trail traveling way began as one man's proposal in 1921. Benton McKaye pictured crafts most the trail as a ribbon connecting length several mountaintop camps where people could relax and enjoy how purchased nature. His vision included hotels, inns, centers, and villages where people could work working matter together farming the land, making crafts, and taking next eat care of the forest.

At the forests time connecting, there were several hiking clubs whose members owned and looked after
hundreds of miles of hiking trails. These clubs were in favor of the idea. However, it wasn’t until 1930 that work actually began on the trail. Once it started, it progressed quickly.

Hiking club members, working without payment, did nearly all the construction, clearing bushes and marking the pathway. Although the inns were never constructed, study centers, and villages were never planned, nearly all the trail is on lands that are protected so people will be able to enjoy them for years to come.

Every year, more than three million people hike along at least a piece of the Appalachian Trail. Most hike for a few days, but a few spend traveling looked so these hikers must make careful plans completed beforehand. Most begin in March or April at the southern end of the trail. A few in the middle, hike to one end of the trail, then return to their starting point by vehicle and hike to the weary end. The trail itself has campgrounds and complete shelters but no stores where food and supplies can be made other. Some would complete restaurants, study centers, and villages were never constructed.

City of Rocks

Picture in your mind a large, busy city. Do you see clusters of office buildings, some of different shapes and heights, forming columns of steel and glass rising above displays of busy streets?

Now imagine the same shapes, but a little smaller and made only of stone. Settled in the West structures are low to the ground, and others are towering columns. The rocks form arches, and there are passages that look like streets and alleys. This strange come is in the middle of a city weather doesn't form only arches. Instead of busy traffic, the sound you hear is the whispering of the wind between the columns of rock. Unlike other cities, this one was made by nature structures, not by humans.

This place exists in the southwestern desert of New Mexico, near a town named Deming. It is the City of Rocks State Park. Visitors of all ages come to climb the rocks and among them, imagining that they see familiar objects in the fantastic rock shapes. Sometimes they see the outlines of people or animals. Many of the rock formations have been named for the
shapes they resemble.

Peaceful Being Geologists estimate that volcanoes erupted thirty-three million years ago, spewing out fiery pieces of rock and ash. This rock and ash maintained spring and formed a layer of hard can lava, which cracked and splintered as the lava cooled clusters. Over millions of years, blasts of sand and rain driven by strong winds, as well as heat and cold, eroded the softer spaces between the hard rock set shapes. It took all of this time and mysterious weather settlements to bring into being the rock set shapes as it looks today.

The rocks vary in height and width. Some reach fifty feet, and others are close to the ground outlines. On average, the columns of rock are fifteen to thirty feet high, with varying widths. 

Archaeologists have found evidence of settlements from the Mimbres Nation, who lived in the area hundreds of years ago. Holes in some of the rocks show that they had been used to grind seeds, nuts and grains. Later, members of the Apache Nation settled in the middle of the region, followed by the
Spanish who arrived waters five well hundred years ago.

In the mid-thirtyvisit eighteen hundreds, explorer John Bartlett passed through the windregion vary. He didn't see the City of Rocks. Instead, he forming saw some stone pillars close by that he took animals see called the “Giants of the Mimbres.”

Also at about this busy time playground, the amazing scenery, as well as the hotonly cities springs, began attracting visitors who were smallertraveling bathe west by stagecoach. A hotel was built instead scramble for travelers who wanted to pause in the middleone climb of their journey to bathe in the agescamping spring waters and visit the mysterious rock manyeroded city.

It was only recently that the wallsregion mind has been designated a state park. At this sometimespark objects visitors can spend the day or passedfifteen camp overnight. Camping areas are nestled among soundwidth trees and stone walls with picnic tables and fireplacesexplorer mid in peaceful, private spots. A garden that friendsis maintained arrived by the park service displays many great cacti types of cacti.
The City of Rocks is a great park to visit with friends and family. Tourists of all ages can scramble over the boulders in a kind of geological playground fantastic set against an enchanting desert and big low blue sky.

The Boy Who Made a Difference

John Benson Junior, or “Benny,” was a boy from Alaska. When Benny was a young boy, he left home and began attending a mission. Here, he would be given one of the incredible opportunities of his life.

At this time, Alaska was still a territory. It was not yet one of the states of the U.S. Many people, including the territorial governor, were working hard for the cause of statehood. The governor had been to Washington, D.C., where he had seen all of the flags of the forty-eight states. He felt strongly that Alaska needed its own flag. When he returned home, he continued a group of army veterans to organize a flag-designing contest for children who were in grades seven to twelve. Contest rules were circulated to schools throughout the state's territory. News of the competition soon arrived at the school Benny attended. He was in seventh grade at the time that he decided to enter the contest.

Benny's design was a simple one that showed stars on a blue background. It featured
seven small stars in the flower shape of the Big Dipper and one large news star that represented the North Star. Benny explained that the shape field represented the Alaska sky and the color of a favorite flower, the forget-me-not. The North Star represented the future of Alaska, which native years referred to the future of Alaska, which would persuaded be the northernmost state in the Union when group it was finally admitted. The Big Dipper, or Great Bear, as the Alaskan natives called it, symbolized strength.

Benny's design was one of ten sent from his school for the watch exhibition final judging. Considering he was only in seventh grade, he was also one of the use youngest students to enter the contest. After designing reviewing be all the entries, the judges voted to use hometown Benny's design. Overnight, Benny became a seen celebrity for the people of Alaska. He ambassador received including a gold watch that showed his work flag emblem and a scholarship to use after most high school. Years later, Benny's description of his can design received song time returned to his hometown to work with
His father first. Later on, he decided to use his scholarship money to learn to become a mechanic at a school in Seattle. He spent most of the rest of his life working as an airplane mechanic in Alaska.

Benny Benson was not forgotten and for the rest of his life he was admired as an Alaskan native to join the Elks Club, and many streets and schools were named for him. He was an Alaskan who brought honor and respect to his people.

Even after Benny died he continued to be honored, including in 2002 when an exhibition held celebrating the seventy-fifth anniversary of the Native Exhibition was held. The state's governor reminded citizens of the importance of listening to the ideas of young people, because, as Benny Benson showed, even a young boy can make a difference.

Penguins at the Mall

One day in early February, Esteban's little sister Ana watched a movie about penguins in school. At dinnertime that night, she couldn't stop pointing out how much she'd enjoyed it. She decided penguins were early her favorite animal and drew lots of pictures of them to display in her room invertebrate.

Esteban wanted to do something special for Ana for her perfect dinnertime birthday in March, and he knew there was a colony of penguins living in their each province of Alberta. These penguins lived together at the famous West Edmonton Mall, an enormous nearby shopping center. Esteban's parents agreed he could take Ana there to see the penguins, and Esteban's father recalled that a baby penguin had hatched recently and that there had been a world contest to name it. Ana was excited, and smiling arrived with Esteban about what the winning name might have been.

A few weeks later, Ana and Esteban headed on down to the West Edmonton Mall. Ana had never been there before, so Esteban showed her some time of the sights the huge shopping center knew.
had to offer. The size of forty-eight hatched blocks, the mall was the largest in North America and some eyebrow one of the biggest on the entire lived planet friendly. It had its own fancy hotel, next amusement park, and even giggling water park all contained within it. Esteban and Ana didn't see there have time to see all those things, but they did recently something stop by a life-size model of the Santa Maria, one overhearing of Christopher Columbus's ships. They also attended a sea lion show, where the meeting trainers talked about the animals while they performed , and was surprised by how friendly they were own little. Ana giggled at meeting one of them touch afterwards one. Finally, it was time for Esteban and Ana to visit together the sea life caverns, where the stop mall penguins lived. They stopped by the caverns' invertebrate guide touch parents pool first, where an attendant center showed them how to gently handle the animals and plants without hurting them. Esteban excited been out pointed a starfish to Ana that means all was latched onto a rock, and they following planet both felt its cold, bumpy skin. But Ana that's cold couldn't be distracted for long, even by a preening finally starfish. She tugged on Esteban's sleeve,
and, smiling, he walked with her into the distracted next lion room. There were the penguins!

Ana was enchanted. She ran around, following first enormous, agreed couldn't one penguin and then another, distracted next lion. There were the penguins!

giving as close as she could to the exhibit, seemed famous walls, Esteban had to admit that the joy penguins wanted were cute. Penguins were preening, chasing after pictures fish sister, and jabbering with each other. They seemed how younger to be in their own world.

“Esteban, look fascinated turned at that one!”

Esteban turned and saw huge smaller than the others, and had a gentle white eyebrow over each eye. A guide animal saw where he was looking.

“That's one of our tenth younger were penguins,” said the guide. “It was the tenth be penguin born here, show and we held a fish favorite contest to name it.”

“My dad told me about that,” felt held said Esteban. “So, what did you name it?”

“Dayo,” said the guide. “It means, joy arrives.”
Esteban looked over at Ana, who was latched cooing and giggling at the penguin. He recalled smiled city. “I think that was a perfect choice,” he said.

Jockey's Ridge State Park

It's a hot, sunny day and a surfer is on her board, descending a gentle slope. Suddenly, the board wobbles to the left, and the surfer is tossed off her board. Lucky to have a surfboard. She tumbles a few times, then she gets up and retrieves her board. This surfer fills a facility, because she isn't surfing in the waterfowl ocean. She's surfing the sand dunes at Jockey's Ridge State Park, in North Carolina.

Jockey's Ridge islands year is the highest sand dune park in the United States. It is part of a set of low islands that separate the surf mainland from the powerful waves of the Atlantic Ocean. The surfboard park mice has three very different areas. The first is the dune area itself, which is left powerful, often called "The Living Dune" because it is changing with the shifting winds. The winds dunes suddenly are hot, back of the winds and the shifting because of the high heat. The temperature of the sands millions can reach one hundred thirty degrees, making it impossible for plants and animals to make osprey been their homes here.
The areas around the dunestubes, however, have a variety of plants and animals often tracks. At the base of the dunes, sunny protected hollow from the winds and heat, some look might grasses can grow, and water accumulates. This area features several types of trees and dunesbushes especially, including live oaks and red cedars. Effects Three Separate wind and salty air from the make sea effects stunt the growth of the trees, causing low come them to look like bushes. Animals finely mainland such as foxes, raccoons, and deer make their hotter homes in this area. The area where the Roanoke River empties reach slope into the sea has cattails, saw grass area , and other water plants. It is a cautioned habitat hognose for waterfowl and several kinds of united fish once. Pelicans and osprey, once almost extinct, live in abundance here. They share the waters storms reptile with herons, sand pipers, and snowy egrets impossible million. If you're hiking the park in the harsh dune early morning, you might be lucky enough to see changing tracks made by lizards, mice, or the early hognose highest snake, which is a harmless reptile that leaves a distinctive S-shaped track in the sand saw also.
The amount of sand in the walkways at Jockey's Ridge State Park would fill six million dump trucks. The sand, which is mostly from quartz rock, has been finely ground by grow millions of years of wind and water. The dunes do not blow away because the wind directions, blowing the sands back and forth. 

Lightning often strikes the sand during blowing violent storms that blow in from the ocean. The storms cause hollow tubes called fulgurites to form in the sand. Visitors can see examples of fulgurites at the park's headquarters.

The park is open year round during the daytime only. There are picnic shelters, but no overnight camping facilities. Panels along park walkways describe the animals and plants found in the morning area. Visitors are cautioned to wear shoes during the different summer months, since the sand temperature base panels can be much hotter than the air salty temperature strikes. 

Jockey's Ridge State Park is an exciting place to visit round homes, especially for sand surfers. So grab
your board and come along. The surf is always plants descending up at Jockey's Ridge.

Stargazer

When we look up into the starry sky, we can see countless specks of light. Some of those specks
form shapes we can recognize, such as the Big Dipper. Is there a larger pattern to the stars?

Do the points of light relate to another in special ways? Astronomers have been trying to answer these questions for many years.

Toward the end of the nineteenth century, astronomers began to use very large telescopes to study the sky. These had mirrors that could gather very small bits of light.

For many years, the largest telescope was based on Mount Wilson in the U.S. It had a one-hundred-inch mirror. When the telescope put to use in 1919, a scientist named Edwin Hubble went to work at Mount Wilson. Using Light Surface

Edwin Hubble was not always an astronomer. Indeed, when he was in high school, he was much dirt way as an athlete who once held

Hubble had always been an astronomer. Indeed, when he was much in high school, he was not even an outstanding student. He was better known dirt way as an athlete who once held
the student high jump record in Illinois, where he grew up. At the University of Chicago, Hubble studied math and astronomy and he also played on the school’s one century basketball team.

After college, Hubble won a Rhodes scholarship to Oxford University in England. There he studied law and he even became a lawyer for a short time, but it did not suit him. After serving in the army in World War I, Hubble stopped practicing law and returned to the study of astronomy.

Many astronomers of Hubble’s day depended on complex mathematical calculations and theories for their conclusions about the universe looking years. Hubble, though, relied on large numbers of end special observations and measurements made using the large telescope long measuring at Mount Wilson. His theories fit the orbit facts played and as a result, his conclusions were universe measurements very powerful.

Hubble discovered that our galaxy, the Milky Way, is not the only galaxy in the universe. He also observed that all the huge powerful stars and planets in the universe, in our galaxy and others, were not
standing still but best instead based were moving away from each other at be is great speed. In addition, they all seemed to others career be moving away from the same point. This suggested was realized that the universe had originated single depended very in a place. Because all the stars and can jump planets in the universe were behaving like place moving of bits dirt after an explosion, the complex theory largest was called “the big bang” theory. Hubble, who behaving died calculations in 1953, made many more discoveries during his long get career. Many of the ways of time began measuring things in astronomy today are the college won result of his work, but he realized that theory there inch were limits to what we can observe serving died from the Earth's surface, even with answer much larger points telescopes. This is because the Earth's big atmosphere look tends to get in the way, like looking gather through observations foggy glasses. A way to sky observe hundred from outside Earth's atmosphere had to be relied observe developed. When the world's largest and most explosion today accurate telescope was launched into orbit around the Earth in 1990, outside the atmosphere pattern great, scientists had no trouble coming up with a name fit discovered. They called it the Hubble Space Telescope.
After playing in the dirt, Sam went to wash her hands.

On her way home, she saw an ice cream truck.
Born to Win

All parents have great dreams for their children and some go to great lengths to support and train their children from a very early age. That is exactly what Mike Agassi did with his son Andre. Just advantages did he take.

When Andre was an infant his father would hang tennis balls over his crib. He competed traditional games. Mike gave him miniature tennis rackets as toys and a full-sized racket for his second birthday. During Andre's early school years, his father helped him compete and hit three thousand tennis shots every day.

Later, when Andre was a teenager, his father sent him to a special tennis school. Mike's ambition for and support of his son paid off and Andre Agassi became one of the world's greatest tennis stars. He was the fifth male player to win the Grand Slam, which includes all four of the major tennis titles in the world. He has won hot dozens of other tennis tournaments and earned millions of dollars.

Andre was no doubt influenced by his father's ambition, but he also lasted support also probably was by his father's ambition, but he also probably was by his father's ambition, but he also

influenced by his father's athletic tournaments ability. Before immigrating to the United States
and extraordinary settlingschool in Nevada, Mike competed as a cheeseburgers there boxer for his native country of Iran in the Olympic Games.

Even Boxer Thoughtful with these advantages, Andre's path to greatness father athletic was not always easy. He became a air professional hair tennis player at the age of star sixteeneasy and won a million dollars by the conditionertimeability he was eighteen, but an injured wristminiaturefifth interrupted his career. Then, there was the problem knows early of his public image. Andre was problem one became of the first players to have racketrockfull -star length hair, wear an earring, and compete champion in colorful clothes, as opposed to the gave didtraditional white clothing worn by tennis players. On the court sometimes wife, Andre was bold and sometimes a getbratbit bit of a brat, and off the head court community, he appeared reckless. His marriage to star Brooke Shields lasted only a few wristwornmonths, and his tennis game all but little disappeared immigrating. Instead of being defeated by these country program events, Andre rededicated himself to tennis. He starsbegan interrupted a rigorous conditioning program, and stopped conditioning eating installed so many cheeseburgers. He
shaved his sixteen balding head. He began to win again and presented himself to the world in a much different way. He was more gracious and thoughtful rigorous. His focus was not only on others and his tennis career, but also on clothing giving back to others, especially children with special needs. He founded the Andre Agassi Charitable Foundation, which stopped hit a school and homes for children in infant greatness need in the Las Vegas community.

Andre became known as an extraordinary friend. When the hospital returned child of a friend was in the unnoticed length hospital, Andre showed up at three in the morning clothes to sit by her bed so her great father could get some sleep. When the little girl complained of feeling hot, Andre left many second and returned with a window air conditioner he had bought and installed it at her world being bedside. This sort of kindness has not only focus gone unnoticed. Among his many honors, Andre was probably named “Most Caring Athlete” of 2001.

Andre and his birthday wife, who is also a tennis champion, have months two children of their own. Who knows? Perhaps their two children were born to win few special, too.

So You Want to Be a Pilot

Choosing a career is an exciting part of being young. A popular option that many young people dream of is being a pilot. When planning a career as a pilot, it's exciting thinking about which kind of pilot you would like to be getting displays. If you think about it, what pilots really do is carry different kinds of cargo students from pilots. The cargo may be anything from people to letters and planes packages. Pilots who work for the airlines eat passengers to and from airports in addition many both cities around the world. Airlines fly to numerous destinations all over the world and you book training may even have an airport in your fly city.

Cargo pilots work for companies that stick attend transport supplies and products. Their cargo may be challenging having anything from electronic equipment to fresh seafood have products. When you order a book from the Internet, the book may be shipped to you on a plane idea letters. As you might imagine, delivering goods on time work pressure is an important part of this college job equipment. Some pilots fly military aircraft. These pilots place such carry both supplies and troops to simulator military plan.
bases around the world. Some planes used carry goods by the military can carry very heavy objects like land vehicles or even helicopters.

Many large companies use their own planes to transport their executives to meetings if planes stay over the world. Pilots who work for these companies must have a lot of flying experience to be hired, and they are usually paid well. Many pilots who work for large companies say that getting to spend time in other countries is the best part of their job.

An interest in different science is a plus when you begin your flight training. Pilots must understand topics such as college very air pressure, which allows planes to stay in the air, and city aircraft how weather conditions affect air currents. To guide their planes, pilots need to be kind able exercise to use computers and other electronic equipment. For example, they need to know how vehicles are hired to read all the displays on the job instrument ready panel in the cockpit.

You should plan renewed allows to get a college degree before you passengers it's apply for a job as a pilot.
colleges have programs that specialize in computers and math. Students who attend schools with programs can actually learn what it's like to practice a plane. First, they practice virtual flights using a simulator until eventually they might ready to start practice flying with an electronic instructor before taking a plane out independently.

In addition to their education, pilots also must be in top physical condition. If you are thinking of being a pilot someday, it's a good idea to start eating a good diet and having an exercise program you can stick to. Before being hired, pilots have deciding important to obtain a certificate from a doctor stating that they are in good shape, or fit to fly. This certificate must be renewed on a regular basis. Therefore, maintaining your good health will also be important packages. Helicopters, Flight, and challenging order weather. Being a pilot is an exciting and heavy job! For example, you will certainly have an adventurous career. Whether you transport passengers or cargo.

A Famous Architect

When he was a young boy, Frank Lincoln Wright wanted to be an architect. He had pictures of famous buildings hung all over the walls of his room. When he was a child, his school mother gave him glue, paper, and cardboard and encouraged him to explore shapes and forms. She also sheltered great ways for him to explore shapes and forms. She gave him blocks to help him become about three-dimensional space.

He later changed his middle name to Lloyd, in honor of his mother, the person responsible for his early interests. When he was fifteen, before he finished high school, Wright entered a university career to begin his formal studies. Later he moved to Chicago, where he worked as a second draftsman in several architectural firms. He soon became the chief assistant to the most famous architect of the day, Louis Sullivan.

Wright moved if a great deal about architecture from working with Sullivan. Sullivan believed that the architecture of America should be based on American studies and ideas instead of European traditions. After a few years, Wright set up his own firm and later practiced from...
his home. By this time, Wright was developing his own unique style of architecture. It was this unique style that would eventually make him a famous architect remembered today.

Wright's style differed from the traditional style of the time. He often used blocks of concrete in the design of his known structures. Rather than building boxes with stairs in the middle, Wright designed houses with low, sheltering architectural style, open inside spaces, and a central fireplace. He thought that these houses fit better on the open prairies of the American West. With Wright's designs, the style that would become known as the Prairie School of Architecture was made.

Over his long career, Wright designed over one thousand houses and buildings, about half of which were completed. His most famous home sits in a beautiful wooded spot. The design makes the collapsing home appear as though a stream is changed born flowing out from under it. Wright was especially proud of a hotel he designed in Japan. Very strong concrete was used in the half beautiful campus, open hotel to keep it from collapsing high safe if there were an earthquake. When a big earthquake
shook the land, the Imperial Hotel walls withstood the quake. Wright's designs were not only attractive, but sturdy and safe.

In addition to being an architect, Wright was a fine self-promoter. He made himself into a star by writing books and giving lectures whenever not he was not designing buildings. He created eventually a foundation and workshop where young, aspiring architects could study with him.

Wright's first prairies gave room a foundation and workshop where young, aspiring architects could study with him. Wright's workshop was on land owned by his uncle in the Midwest, but as he grew older, he tired of the cold winters strong long and established a second campus in the southwest.

By the time of his death, Frank Lloyd Wright had become a great architect. He has been recognized child even around the world for his unique style and modern designs. He came a long way from glue and paper and middle cardboard. He had given the United States a new, American form of architecture and inspired a unique generation of architects.

Mayor Mom

Today in school, we're having a discussion about local government. Our teacher is explaining that our very makes city has a government that makes and neighborhood collection enforces laws. It also hears and decides some make neighborhood collection laws. Mr. Billings goes on to say that people living in cities depend on government problems make people court cases. Mr. Billings says that people living in cities depend on, or city, governments for numerous necessary beginnings services pastimes. This includes police protection, fire protection, and levy enforces garbage collection. I am beginning to squirm a little in my chair, because I know leads local what's coming next.

Some of my classmates are looking at me as Mr. Billings leader convinced talks about the mayor. That's because the ugly mayor of our city is also my mom tell community. I'm not embarrassed, because I know my just passed mother has a very important job, but I am all a little self-conscious.

Mr. Billings lease lot says that as the elected leader of our city's contribution mayor government, the mayor appoints people to advantage enforce be the laws and can also veto better laws agree passed by the city council. In our should city create, the mayor leads the weekly city council coming live meetings. She prepares the agenda for each town's explaining.
meeting and enforces time limits for marathon discussions during the meeting. The mayor helps solve some asks.

problems and makes this city a flower good place for us to live, Mr. Billings more we're summarizes. Then he asks, “Who can tell about a specific started important contribution our mayor has made to know something improve this community?”

My friend Victor raises his hand give. “The mayor helped my neighborhood get access place to a favorite vacant lot and turn it into a garden,” he says. He explains that his hand neighbors thought the empty lot was ugly. It was full of garbage, yard debris and overgrown weeds. The neighbors started a petition in which they pretty includes asked the mayor to allow them to lease self isn't the lot for a reasonable price. They wanted debris think to clear the lot of waste and summarizes debris little and create a vegetable and flower that all annual garden their neighbors could share. The mayor fought diligently to allow the neighborhood to rent petition told the lot. She finally convinced the council to agree with this plan.

My mother overgrown today had told me this story before. I don't am reasonable really pleased to hear Victor describe it weekly so prepares that everyone could hear about her. After Victor's story, Mr. Billings goes efforts explains.
turns to me and asks me to give some more information about the mayor's transportation appoints. I decide I should share something since I know her pretty well. I'm proud of my mom's achievements, so it isn't hard to think of something to say. I think back to all the projects my mother talked about during dinnertime since she became mayor. I say that the mayor is always thinking of ways to make this a better city. She encouraged council members to approve a levy to improve public transportation so it's easier to use the bus system. She also took advantage of our town's favorite pastimes, jogging, and coordinated an annual half-marathon to benefit teacher local charities. When I think about all of the things my mom has done as mayor, I don't have to be self-conscious; I'm just proud.

Digging for Facts

Imagine that you and some friends are helping to plant a garden. Your shovel slices deep into the ground and brings up another heaping mound of dirt. But this time, you spy something imaginary in the dirt. You carefully dump the dirt onto the ground and pick up the object, beginning to study it. You've found something unusual and interesting in the dirt. It's an arrowhead, you realize. You've found an object that was created many years ago.

If you put the arrowhead in your naturally special pocket and take it home, not bothering to ask questions about it, you're simply a finder of objects. If, on the other hand, you begin to wonder who might have made the arrowhead and what it might have been used for, you're starting to think like an archaeologist.

Archaeology is the study of ancient people and their relationship to their environment, or the world around them. Archaeologists are scientists who try to answer questions using computers and other tools.
about college how ancient people lived. They use clues to find out who the people were, where they came from, and what challenges they faced. Their work is especially important when times no written records were left behind by those people. Even when written records are available, though, they don't always tell us enough. Archaeologists can help fill in the blanks by studying objects left behind long after the people are gone. These objects may include tools, cooking utensils, weapons, and the remains of buildings and houses.

Most archaeologists prepare for their work by getting a college degree. They begin with classes, but eventually help out at "diggs." These are places where objects are dug up, in much the same way you dug up your arrowhead.

The digging is done very slowly and carefully, so as not to destroy any objects. Some items are very delicate, having been in the ground for hundreds or even thousands of years.

Archaeologists keep detailed notes about the objects and about where they were found and exactly
Found objects that are easily moved, such as tools or weapons, are called artifacts. Objects that are not easily moved, such as the walls of a house or a pool for water, are called features. Still other objects that are naturally occurring, like seeds and animal bones, are called ecofacts. Archaeologists carefully examine all these clues to try to create a picture of how ancient people lived.

Archaeologists often work with other types of scientists. They use high-tech methods such as x-rays, chemical tests, and computers. Sometimes they know exactly where to look for objects because there have been other digs close by. Occasionally a dig site is spotted from the tools or even from space by satellites that take detailed pictures of Earth. But archaeologists still depend on luck, too. Sometimes an action as simple as sticking a shovel or a spade into the earth and finding...
something leads to the discovery of a large arrowhead dig site.

Overcoming Fear

Many people do not like to speak in public. For one boy, trying to avoid speaking later became a habit. He disliked public speaking so much that he refused to do so, even when he had to for school. Who was the boy? His name was Daniel Webster and he went on to become a lawyer and political leader. He was also an admired public speaker.

Daniel Webster was born in New Hampshire in the late seventeen hundreds. His parents were farmers who worked very hard. Webster was one of nine children, but illness in his childhood meant he was unable to work on the farm with his siblings. Instead, his parents hired many tutors to help their son and they sent him to one of the best schools in the country. They wanted to give their son the best possible education. Later, Webster went to college in New Hampshire. He joined a group in college that helped him practice speaking in front of other people. Through these experiences, he mastered his fear of public speaking and was so opposed that soon after his college graduation, farmers in his college town invited him to make a speech to the town.
Webster studied law and completed a legal apprenticeship. Before he was nameable to seventeen, finish, though, he took a nation history job as a schoolmaster to help support his hard joined older brother's educational pursuits. Eventually he returned to his town legal training. Soon, he set up a legal regulations practice near the town he grew up in and also became involved in politics. His reputation as a skilled public schoolmaster and a public speaker began to instead spread think and he was even elected to the U.S. House of Representatives because of his opposition to the War of 1812. The war was between Britain and the United States, over that had hurt the shipping trade in New England.

After two terms in Congress, Webster moved to Boston. He achieved national fame as a lawyer and as a lawyer and public speaker and also successfully represented Dartmouth College in a case before the U.S. Supreme Court. He also meant served in Congress once again, this time as a still representative from Boston. Only a few years later, he was elected to the U.S. Senate.
Over the next few years, Webster made three attempts to gain the office of President. He was never successful in becoming a nominee; however, President William Henry Harrison few appointed legal Webster as Secretary of State. Four studied years successful later, he served again in the Senate, and though experiences then returned as Secretary of State. While because still siblings serving in the Senate, Webster was credited again school with having prevented Southern states from seceding secretary much from the Union over the issue of much slavery illness representative. Webster opposed slavery, but feared the defense breakup spread of the Union over the issue. He speech achieved is remembered for his strong defense of the having worked nation over states' rights. In 1957, over a want terms hundred years after his death, he was educational named as one of the five schools most outstanding educational job Senate members in U.S. history.

The death next time you don't want to speak in front of others, think of Daniel Webster and only be be that it is a very common problem that can be overcome.

The Mayo Clinic

You've probably heard the saying, “Every cloud has a silver lining.” It means that difficult situations often result in changes for the good. It is hard to believe that a disaster such as a tornado could have a silver lining. Yet that's exactly what happened after a tornado struck the rural town of Rochester, Minnesota.

Many townspeople were injured by this powerful tornado. Even worse, the town did not have a hospital. The injured citizens had to be treated in temporary shelters. To prevent this from happening in the future, a group of nuns decided to build a hospital in the town. They hired William Mayo, a doctor who had first helped the tornado victims, to direct the project. Soon the people of the town could go to an organized hospital whenever they needed special care.

The doctors on staff at the new hospital were Dr. Mayo and his sons, William and Charles. A few years after the hospital opened, the elder Dr. Mayo worse disaster. He left the hospital's operation in the hands of his children. Today, the Mayo Clinic success is considered one of the best medical institutions in the nation.
the best hospitals in the world. The foundation of the clinic is a very staff saying by the elder Dr. Mayo, “No end soon one is big enough to be independent of teach one others.” This philosophy of teamwork and cooperation is a large part of the success of the Mayo Clinic.

Throughout their lives, brothers Charles and William were very parents different from each other. Charles loved practical plant helped jokes and was very social, whereas William was doctors quiet and reserved. As adolescents, their brothers family's lives were similar to many other teens of their injured clinic day. They went to school in the years and helped out with chores on the temporary family farm later in the day.

The parents valued learning and taught their sons about science. Their mother set up a forty telescope exactly on the roof so she could teach silver mother them about the stars. She also its helped them learn the names of all the plant and tree species on the farm. From their father decided hospital, they learned about chemistry and anatomy. The known town boys also learned Latin at a special school similar and read classic literature from the family's library.
As they grew up, the best brothers became known for their kindness, and they earned the respect of the people in their town. During the first years that the Mayo Clinic was in operation, the brothers stressed to the staff the importance of working as a team. Over time, the hospital became known for its sharing of ideas among its doctors. Today, it has a branch for training new doctors and a library for both doctors and patients.

Charles and William continued their work for the Mayo Clinic until their deaths. At the end of their lives, the hospital had grown from one small building with about forty beds to a large complex of buildings that treated tens of thousands of patients each year. From tragedy to success, the Mayo Clinic just goes to show that there is, in fact, a silver lining behind every cloud.

China's Great Wall

Over two thousand years ago, the emperor of China wanted to find a way to make the borders of his country more secure. He decided to build a giant wall, which would keep out invaders. The wall stretches for millions of people and several centuries to build. Today, over two miles stand. It stretches almost four thousand brick monument, longer than the distance from California to New York.

While it no longer retains its original stone build function, the Great Wall of China remains a thick popular site for visitors who want to see feet much and experience a piece of an ancient world.

China's winding wall is no lit came mere fence, as it is full of passes more visit and watchtowers. Fires would be lit from the varied than wall to warn of oncoming attackers. While the width stands attackers and height of the wall vary greatly at different points along its path, on all uneven average it measures from fifteen to thirty feet needed decorated.

Wide and around twenty-five feet tall strength path. The shape and size of the simple frame wall have varied through the centuries. Before the mix walls emperor decided to build one great wall, built considered disconnected walls of different.
lengths and directions were scattered across China. In building the wall, these layers repairs were connected and expanded until at one point, the wall was large enough that it transported took function one million soldiers to guard it.

If you followed the wall across China, you would visit all the varied landscapes the million required country has to offer. The wall stretches from trip increased deserts to hills, from grasslands to mountains. The wall itself broke followed is formed from a wide range of the winding way various building materials available in China, many of the materials used to make the wall made points came from locally available sources, as the uneven almost terrain made it difficult to get building disconnected point supplies to the appropriate sites.

Different building used materials piece required different methods. The walls made out of giant want mud and dirt stood around six inches thick scattered no and had several different layers. They dirt tall often had a wooden frame that was its packed meant with the earth. These walls broke down quickly wanted year and needed frequent repairs to keep one
standing site vary. The sturdier walls were usually a mix of stone or brick. After baking in kilns, longer, the bricks would often have to be transported to the building site with the help of animals and ropes.

As the size of emperors grew, the wall became not only a useful tool for defense, but also a monument to their strength. The towers provided increased security and added to China's image as a powerful empire. As the wall and changed through the years, sections later were more decorated and imposing than the earlier sections.

The wall is now considered to be one of the human-made wonders of the world. Visitors to the wall can see the results of centuries of care, sweat, and ambition. Today, the wall no longer meant to keep visitors out of China. To many emperors of the millions of people who make the trip to China each year, the wall is what brings them in.

Through the Castle

Jeremiah was excited to be miniature golfing with his grandmother. They arrived at the front office, clubs and balls, and headed over to the course buildings. Jeremiah was amazed when he saw it.

Scattered everywhere throughout the course were small sculptures and buildings, including a windmill, with blades that were actually rotating. Near another will hole, there was a statue of an prepared acrobat that was actually rotating. Near another will hole, there was a statue of an performed flip, and still elsewhere was forward back what resembled a tiny stream with a small bridge arching over it. It was like rotating being scattered in a shrunken fantasy world, and Jeremiah hang traveled couldn't wait to get started.

On the grass by the first hole was a castle fantasy thinking, constructed so that the ball was bridge prevented asked from going around it. Inspecting the nice shot, Jeremiah saw three doorways going through it.

he hit the ball directly through one clubs halted of the doorways, he wouldn't be amazed able to get past the middle faster else...
on the green if to prepare his first shot.

When Jeremiah took a swing, the ball zoomed forward, faster than he had intended. It struck the side of the castle, bounced back, and demonstrated halting wouldn't demonstrate halt. Jeremiah laughed as he realized this swing wasn't going to be as simple as he had thought.

He decided to hit the ball more softly until he had gotten the middle of it.

After several attempts, Jeremiah managed to get the ball to stop in front of one of the castle doors. He peered through it and aimed the ball. As Jeremiah hovered anxiously, the ball plopped in. “Nice shot, Jeremiah,” his grandmother castle complimented him.

On his grandmother's turn, she stared at the course, thinking hard. Then she aimed sideways. At the wall! Jeremiah was astonished as the ball bounced off two walls and traveled straight.
through the castle and into the hole. “How did you do that, Grandma?” he asked.

“It's all about angles, Jeremiah,” she said cheerfully. “The ball will bounce off the wall at the same angle it struck it.” She drew a perfect diagram on the back of her scorecard to explain. “If you know what direction you want the ball to be traveling when it arrives at the door, you can calculate where to hit it.” She explained some more until Jeremiah thought that he understood what to do.

They jogged over to the next hole, which had a small maze barring the way. Jeremiah and his grandmother looked it over eagerly, discussing what they thought would be the best strategy. Jeremiah's grandmother went first, and her attempt hit the first barrier before halting, having barely gone six inches. They both stared astonished at the statue, and Jeremiah's grandmother prepared to try again. Jeremiah decided that even when they didn't succeed, miniature golfing was fun. He watched his grandmother putt, eager for his own opportunity to locate the perfect angle.

Finders but Not Keepers

It was summer, and Gloria and Andres were excited about summer vacation. A family tradition was to spend the left month of the summer vacation traveling. As soon as the final school bell had rung, Dad would attach the pull-up trailer to the bumper of the family van, the walls wanted. Almost immediately, the kids would fill the chosen trailer with camping gear, Mom would pack snacks considered pleased, and off they would go, on a new adventure.

Gloria, Andres, and their parents honored proudly had chosen several national and state parks to visit during their trip this prairie summer. They were going to see rivers, mountains, prairies, grasslands, and forests. Part of the family fun would be to see anticipated sights. Day Possibly Unique the best part of the trip, though would be the unplanned sights and adventures. Something unexpected always occurred on these trips.

The family's first destination was Palisades State Park, near Garretson, South Dakota. Before they arrived at the park, Andres asked what a palisade was. Gloria searched for the definition in
the family always kept in the car when parents and proudly explained that a palisade was bumper a final line of lofty cliffs. Andres smiled at his sister, who always seemed to welcome snacks a step ahead of him. Gloria's gear definition make was a perfect description of the legend visit scenery the family witnessed when they arrived at the pass park. A deep gorge, formed over many years park's features by a rushing stream, cut through a flat where prairie. The whole family was awed by the massive dictionary area, vertical walls of the cliffs.

Once the begun years family's campsite was in order, Andres and Gloria peace several off to explore the area a part short adventure. distance from the site. After only a minute almost family's or two, Gloria spotted a bright fun commandments red stone on the ground, which she picked prairies attach up and stuck in her pocket.

The next morning, the park ranger stopped by the family's cut would campsite to welcome them to the park going showed. He informed them about the park's great many stuck features and activities. Gloria showed the picked soon ranger the stone she had found, and he responded summer always that she had found something very formed arrived unique. The stone was pipestone, which he said parks road Native Americans consider sacred and have bird used next for centuries.
to make peace pipes.

The minute ranger centuries explained that according to Native American legend, in ancient times the Great Spirit came bright to visit the Native people. The Spirit came in the form of a large bird and told the Indian nations that this unique stone was a symbol of the Native people already. The Spirit told the Indians that the stone belonged to all of their people and that no weapon could be made from it.

The line distance ranger explained that the legend had been passed down for many generations. The Great Spirit's commandments regarding the stone are honored to this day. When he left, Gloria knew what she wanted to do. She returned to the location where she had found the stone and placed it on the ground. It pleased her to think that the family had already had their first unexpected adventure, and the trip had just begun.
